

ABSTRACT

In a first aspect, a system is provided for queuing people that are to use a bathroom. The system includes (1) a controller; (2) a monitoring device coupled to 5 the controller and adapted to monitor occupancy of a bathroom; and (3) computer program code operative with the controller. The computer code is operative with the controller so as to allow the controller to (1) receive a request to use the bathroom from a user; (2) enter the user 10 in a bathroom queue; and (3) notify the user when the user should proceed to the bathroom.
